14.5dpc embryos [total RNA provided by Minoru Ko, Wayne
State Univ., from 2 ]; double-granded cDNA was ligated t
Eco RI adaptors (Pharmacia), digested with Not I and
cloned into the Not I and Eco RI sites of the modified
pT/T3 vector. Library went through one round of
normalization, and was constructed by Bento Soares and
M.Fatima Bonaldo.

double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. This library was constructed from the same fetus as the fetal heart library, Soares

of Mycobacterium leprae
Mol. Microbiol. 7 (2), 197-206 (1993)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      In codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. All CDS over 100 codons have been analysed. Gene prediction is based on positional base preference in codons especially where there is an increase in the observed/expected third position G + C. CAUTION. We may not have predicted the correct initiation codon. Where
                                                                                                                                                                                                                  acps; CoA.apo-[Acyl Carrier Protein]; DNA polymerase III alpha chain; dnaE; fas; ileS; ilvA; isolencyl-tRNA synthetase; L-asparaginase; L-glutaminase; lipoprotein signal peptidase; lspA; oxidoreductase; pseudogene; pseudouridine synthase; RLEP element; rluC; threonine dehydratase blosynthetic; type I fatty acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Work in Paris is supported by the Heiser Trust, the Association Francaise Raoul Follereau and the Groupement de Recherches et des Etudes des Genomes (GIP-GREG).
Details of M. leprae sequencing at the Sanger Centre are available
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            on the World Wide Web.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22 Mapping Group. Further information can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        requests: clonerequestesanger.ac.uk
On Jan 16, 1999 this sequence version replaced gi:3892846
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IMPÓRTANT: This sequence is not the entire insert of clone 327J16. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

The true left end of clone 150C2 (AL022318) is at 111647 in this sequence. The true right end of clone 779B17 (AL021806) is at 50467
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ALO08583.1 GI:4160195
HTG; CHROMODOX; CpG island; Neuronal Pentraxin Receptor; outer arm
Dynein light chain 4.
                                                                                                                                                                                                                                                                               HS327J16 111746 bp DNA PRI 15-JAN-1999 Human DNA sequence from clone 327J16 on chromosome 22ql2.3-13.2. Contains three novel genes: the human ortholog of mouse outer arm Dynein light chain 4, the human ortholog of rat Neuronal Pentraxin Receptor and a novel member of of the CHROMODOX protein genes family. Contains ESTs, STSs, a GSS and putative CpG islands,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         32716 is from the library RCCI3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. The length in codons is given for each CDS.
Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database.

correct initiation coden. Where possible we choose an initiation coden (ady, agy, trg or (att)) which is preceded by an upstream colon (ady, ago, trg or (att)) which is preceded by an upstream initiation coden). If this cannot be identified we choose the most upstream initiation coden). If this cannot be identified we choose the most IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions. Cosmid 664 lies between D31 and D63 in the Asel-D genomic restriction fragment.
                                                                        prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778[1994]) and the FramePlot program of Bibs et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
jun/cgi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation

Murer differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences submission or responding to the overlapping clone, as we submit sequences with The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Emi. EMBL: Sw., SWISSPROT; Tr:, TREMBL
This sequence is the entire insert of clone 333A15. This sequence
has been finished according to sequence map criteria as follows. An
attempt is made to resolve all sequencing problems, such as
compressions and repeats, but not necessarily within known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chri 333A15 is from the library RPCI3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                 ; Search time 152.56 Seconds

for modulatiny from the modulating form of the movel HR NR6. Claim 5; Page 84-87; 182pp; English.

Claim 5; Page 84-87; 182pp; English.

The haemopoletin receptor (HR) NR6.2 is a form of the movel HR NR6.

The haemopoletin receptor (HR) NR6.2 is a form of the movel HR and it's differentiation between the movel HR and a light of cells. The HR and it's differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.
                                                                                                                                                                           Novel hemopoletin receptor NR6.2 gene. Haemopoletin receptor; cell proliferation; cell differentiation; cancer; cell survival; therapeutic; neuronal proliferation; drug screening; ss;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             26-007-1998 (first entry)

Claim 4: Page 77-81: 182pp; English.
The haemopotetin receptor (HR) NR6.1 is a form of the novel HR NR6.
The haemopotetin receptor (HR) NR6.1 is a form of the novel HR NR6.
Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                         NRG as a novel haemopoietin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, naintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel haemopoletin receptor NR6.1 gene.

                                             New nucleic acid encoding U4 haematopoietin receptor superfamily chain - potentially useful, e.g. for modulating cell proliferation or immune response, for treating cancer and auto:immune.disease Claim 1; pages 25-26; 38pp; English.

This is the nucleotide sequence encoding the murine U4 protein from the haematopoietin receptor superfamily, used in the method of the invention for the modulation of cell proliferation, or the immune response. Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding as tissue markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune diseases,

The present sequence encodes a protein designated Zeytor5, which is a cytokinin-like receptor. Soluble Zeytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart of cardiotrophin-1 on cardiac pathologies, so preventing heart blood, and to discover other possible Zeytor5 ligands. A probe comprising Zeytor5 DNA or RNA can be used to determine the presence and integrity of the Zeytor5 gene on chromosome 19. Antibodies and the candidotypic antibody could be used to purify Zeytor5 and therapeutically to modify Zeytor5 ligand effects.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Vaccine, also with replacement bacterial or viral pathogen immunogens and/or cytokine(s), inserted at deletion arample; Fig 11, 109pp; English.

O'8165/R63461 are the nucleotide sequence and deduced AA sequence of BHV 1 UL49 homologue gene. The complete DNA sequence between UL48 homologue gene. The complete DNA sequence bresented. Putstive G-C box, TATA box and polyA signal sequence are indicated in FT. The boundaries of UL50, UL 49.5 and UL48 oRFs surrounding the UL 49 homologue gene are also indicated. Signal Sequence Sequence 1496 BP; 212 A; 535 C; 517 G; 237 T;

C A genomic DNA molecule (164785) comprises the promoter region of the human oxygen regulated protein ORP 150 gene. It was obtd. from a human placenta genomic library using probes based on human and c a human placenta genomic library using probes based on human and c rat ORP 150 cDNA clones (see also T64783 and T64784). The sequence covers the 5' untranslated region to just before the translation in initiation codon in exon 2. It is able to promote translation in cells when exposed to hypoxla, and will be useful for analysis of the corresponding human gene, partic. for facilitating its appln. C to the treatment of ischaemia diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            claim 24, Page 56-66, 93pp; English.

Claim 24, Page 56-66, 93pp; English.

MI and MT2 proteins were isolated from malignant cells essentially following the method of Penman and Fey described in US Pat. Nos. 4, 2010 and 4, 885,236. DNA sequences encoding these proteins were cloned by probing expression librates using monoclonal antibodies raised against the isolated INM proteins. The genetic sequence cooling MT2 has been disclosed by Yang et al. 1992, J. Cell Biol. 116:1395-1408, and is referred to by them as 'NuMA'. The nucleotide sequence encoding MT1 has not been described previously. Both the MT2 proteins are distributed throughout the nucleus (with the exception of the nucleolus) in non-mitotic cells, and localise to the exception of the nucleolus) in non-mitotic cells, and localise cell type in a sample which uses a mRNA complementary to 254841 is claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    15-701-1994 (first entry)

The sequences given in T77782-83 encode fusion proteins which contain TWAM (nuclear mitotic apparatus).

The sequences given in T77782-83 encode fusion proteins were used in the identification of NuMA interecting proteins (NIP's) (see also W21729-30).

W21729-30).

W21729-30).

W21729-30).

W21729-30).

Ab, raised conventionally using NIP-1 or -2 as immunogen, are used to detect NIP (or their complexes) and to block their activity for detect NIP (or their complexes) and to block their activity for which may be markers for a berrant (including malignant) cell growth (which can also be detected by nucleic acid sequencing). associated multi-protein complexes, chimeric proteins, antibodies, nucleic acid, etc., involved in nuclear-cytoplasmic protein transport

Disclosure; Page 58-61; 112pp; English.

Disclosure; Page 58-61; 112pp; English.

The nucleotide and deduced as sequences of human transducin-like chancer of split proteins TLE-1 (962175, R51476), TLE-2 (062176, R51477), TLE-3 (062177, R81478) and TLE-4 (062178, R51479) were determined. The as sequences were compared with that of Drosophila (R5147), TLE-3 (062177, M81478). Comparison of the WD-40 domains of these proteins defined the consensus residues shown in R51480. The CN motifs of the proteins were compared with those of the SY40 T antigen, human c-myc, human p53, human A-myb and doirsal proteins with respect to nuclear localization site, and caseln-kinase II and cdc-kinase plosphorylations tites (sequences R51482-96). TLE can be need to the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of the contact of

Claim 16; Page 42-50; 78pp; English.

The sequences given in T77782-83 encode fusion proteins which contain the sequences given in T7778-83 encode fusion proteins were used in the identification of NuMA interecting proteins (NIP'S) (see also W21729-30). Compounds which interfere with the interaction of NuMA of NIP are used to modulate cell division and/or proliferation. Ab, raised conventionally using NIP-1 or -2 as immunogen, are used to detect NIP (or their complexes) and to block their activity for detect of dagnostic or therapeutic use, e.g. to detect defective NIP (or their complexes) and to block their activity for diagnostic or therapeutic use, e.g. to detect defective NIP (which can also be detected by nucleic acid sequencing). Also where complexe malignancy is related to defects in NUMA or NIP, it can be treated by sequence 6579 BP; 1691 A; 1806 C; 2107 G; 975 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Sequence Seq

13'), on equal amounts of mRNA from 2 13.5dpc and 2
14.5dpc embryos [total RNA provided by Minoru Ko, Wayne
State Univ., from 2 ]; double-stranded cDNA was ligated to
Eco RI adaptors (Pharmacla), digested with Not I and
cloned into the Not I and Eco RI sites of the modified
pT7T3 vector. Library went through one round of
DT7T3 weathen, and was constructed by Bento Soares and
M FATTIMA BOARDA A.

14.5dpc embryos [total RNA provided by Minoru Ko, Wayne
State Univ., from 2 ]; double-stranded cDNA was ligated to
Eco RI adaptors (Pharmacla), digested with Not I and
cloned into the Not I and Eco RI sites of the modified
pT7T3 vector. Library went through one round of
mormalization, and was constructed by Bento Soares and
M.Fatima Bonaldo. " 93 t
